# AT HYDRO ONE, THERE ARE NO BOUNDARIES. ANYONE CAN CHOOSE THE CAREER THEY DREAM OF. WHAT WOULD YOU LIKE TO DO?

**Electricians** work with our electrical equipment and at our stations. If you enjoy physical work and don't mind a little rain, wind or snow, this might be perfect for you! You'll also need to be ready to climb to new heights, because our electricians sometimes work on ladders and climb steel structures—who wants an office, right?

**Power Line Technicians** are people who build and take care of the lines that bring electricity to people's homes and businesses. If this is something you think you might be good at, you'll need to love working outside, doing physical work in all kinds of weather, and you'll need to be nimble and proud, working at heights on ladders, equipment, and even in trees! Since our powerline technicians are trained to perform work on live electrical lines, safe work habits are a must!

**Truck & Coach Technicians** take care of our impressive fleet of off-road and on-road vehicles and work equipment. This job is perfect for people who love big machines and learning about the way things work—and making sure they do! The best part? You get to travel and work all over the province, both in the shop or outdoors where the machines do their work.

**Utility Arborists** have an amazing job. They keep our power lines clear of plants and trees that could cause a power outage or unsafe conditions. If you'd like to see them at work, you'll have to keep your eyes on the sky, as they're often working high, in trees or on our elevating equipment. If you love working outside and getting a great workout on the job, this could be the career for you. And hey—how many jobs come with a chainsaw and the safety training you need to work safely.

**Protection & Control Engineering Technicians** are like inventors, testing our high-voltage transmission system for problems, and working with engineers to develop and introduce new technologies to make sure electricity is

reliably and safely transmitted across Ontario. If you are creative and inventive, and like the idea of working outdoors in a transformer station environment, keep this career in mind.

**Grid Operations Controllers** manage the flow of electricity across our grid, working closely with power line technicians and teams in the field, keeping them safe as they perform power line maintenance or repair bigger problems after a big storm. This career is perfect for people who are great communicators, stay calm under pressure, and love being at the heart of the action.

**Professional Engineers** have lots of interesting opportunities at Hydro One. Whether they are electrical, civil, mechanical engineers, they work collaboratively to plan and manage a huge range of projects, examining and solving problems and bringing new ideas and technologies to the electricity grid. If you enjoy math and are a creative thinker who isn't shy about working with others to solve problems, we hope to see you in a few years!

Hydro One has over a million customers, so our jobs aren't limited to engineering and field work. If you think you'd prefer working in an office, we have many **Corporate Roles** in offices in Toronto and across Ontario. If you like working with people, you might enjoy a **Customer Service Role**, helping to support our our customers. If you like numbers, you might be perfect to help manage our finances as an **Accountant**. Our communications team keeps people informed about safety and the work we do, and our **Human Resources** team helps spread the word that Hydro One is a great place to work. This helps us find amazing new people to join our company—people just like you.

**No matter what job we do, we are all safety-minded, work well as a team, care for our communities, and take pride in a job well done.**

**We believe that diversity makes Hydro One strong. We encourage First Nations, Inuit, and Métis people, women, visible minorities, and people with disabilities to consider a career with us, and believe we have a lot to offer—and a lot to gain.**

## ► Next Steps:

Many current Hydro One employees began their careers in a student role. Each year, Hydro One welcomes many students to our team in a variety of student opportunities, from the field to the office—and everything in between. Students work hard, but have a lot of fun learning and contributing to different projects to help them build skills and gain real-world experience.

Speak with your guidance counsellor to make sure you're taking the right courses to get where you dream of going in your future career. Then, go get it!
